

Gas Oil Extra

Description

Meekin Oil Gas Oil Extra is gas oil (BS2869:A2) treated with an upgrade product formulated to allow modern diesel engines calibrated on EN590 DERV to run on red diesel. It also compensates for some of the deleterious effects of a higher FAME content e.g. tendency for water pick-up. The product will additionally enhance the performance of older vehicles.

Application

Gas Oil Extra will counter any negative effects resulting from the introduction of the latest gas oil specifications, notably the reduction in sulphur content and the increase in the allowable FAME (biodiesel) content.

Typical applications are agricultural and horticultural machinery, construction equipment, airport vehicles and fork lift trucks.

The additive product is formulated from recognised fuel additive components and should not void an engine manufacturer's warranty. In fact, very many engine manufacturers now recommend the use of upgrade additives when red diesel is used.

Features

- **Increased cetane number**

Benefits

- easier starting
- increased pulling power
- smoother power delivery
- reduced visible emissions (smoke)
- improved combustion efficiency
- aligns with modern engine calibrations

- **Increased fuel lubricity**

Benefits

- compensates for sulphur reduction
- protects against premature wear in fuel pumps and fuel injectors
- reduces friction
- prevents emulsions forming and resultant filter blockages
- keeps water out of the fuel
